

Alumi

Alumi – designed by Nina Jobs, is a flexible freestanding screen for the office as well as for public areas. The framework is made from aluminium, which means that it is light in weight and very solid. The framework is available both as white anodized and silver anodized.

Alumi can be used as a freestanding unit or connected together. The screen has acoustic filling and both sides of the screen are covered with compressed, sound absorbing polyester felt or Europost 2 standard colours.

With its sound absorbing core (class B), it creates a comfortable work space. It is also possible to use other materials like glass boards, wooden panels and notice boards. Assembled without any tools.

Alumi

The popular Alumi Combi screen is developed to make meetings flexible. It's both a screen, sound absorbent and mobile writing board in the product!

The frame is made from silver- or white anodized performances. One side is covered with a writing board (SilverPro, optic glass or E3 whiteboard) and felt surface. The other side is covered in felt in standard colours, Dot- or Block pattern. As an alternative to the felt, the screen can be covered in fabric Europost 2, available in 11 different standard colours. Blockpattern in Europost 2 standard colours are available on request against an upcharge..
